

BandFlow

Work delivered to your wrist, one step at a time.

Wristband task delivery with a phone app and web dashboard

• Work in progress: voice entry and vibration alerts are in hardware assembly; no measured results yet.

1 What BandFlow is

A boss creates a piece of work. It is split into **ordered steps**, and only the **current step** is sent to the assigned worker's wristband over Bluetooth. The worker taps **DONE**, the next step arrives, and the boss sees progress update live.

- Boss and worker accounts
- One step at a time
- Live progress
- Wristband + app + web

2 Who uses it

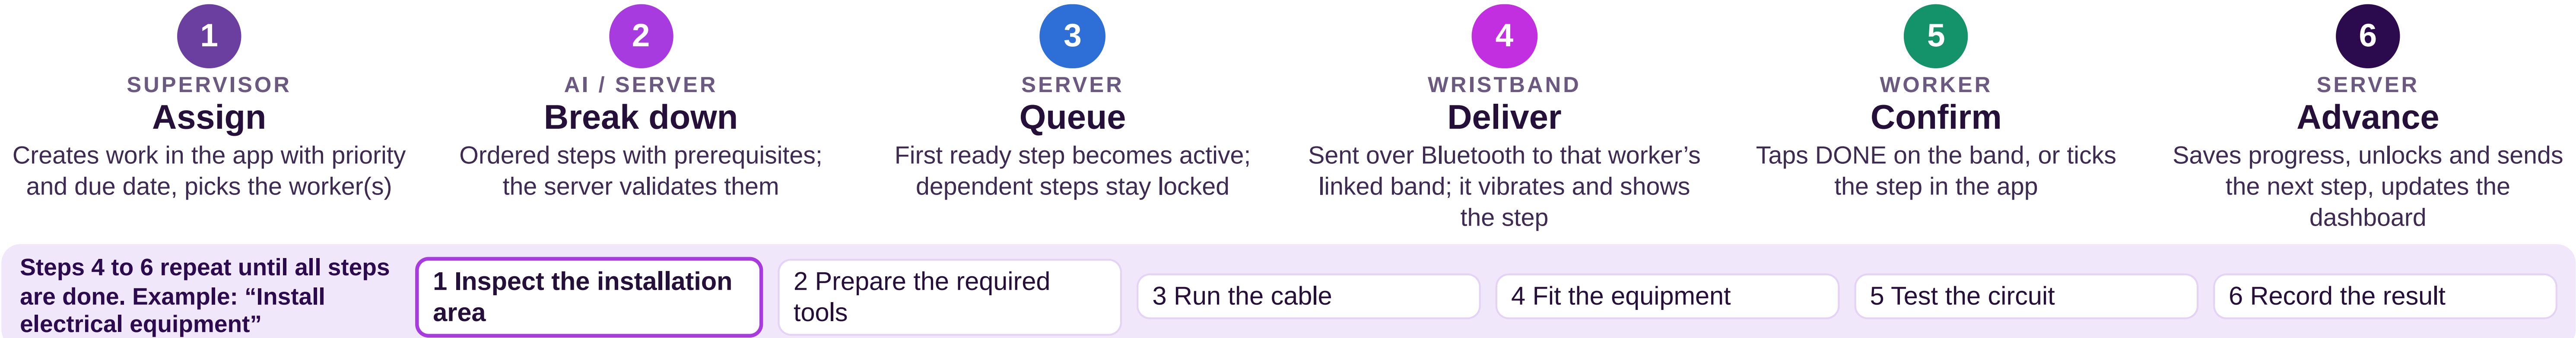

Boss

- Creates work with priority, due date and steps
- Picks the worker, or several workers
- Sees team progress and worker status
- Deletes work or a single step
- Resets a worker's forgotten password

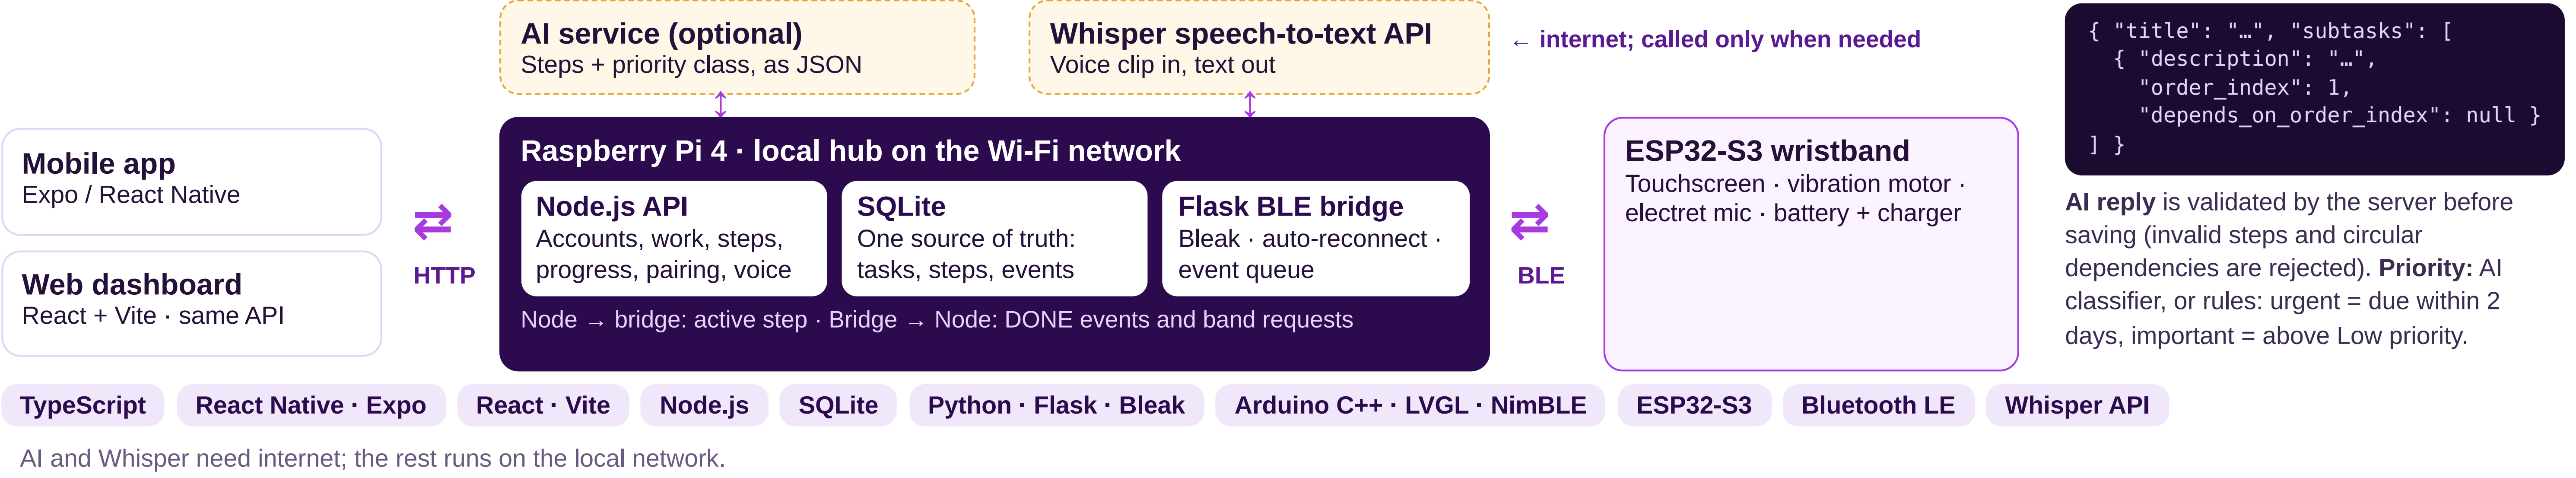

Worker

- Sees assigned work and each step's status
- Ticks steps in the app
- Links a wristband with a 6-digit code
- On the band: matrix, works, steps, DONE, remove a step
- Edits profile and password

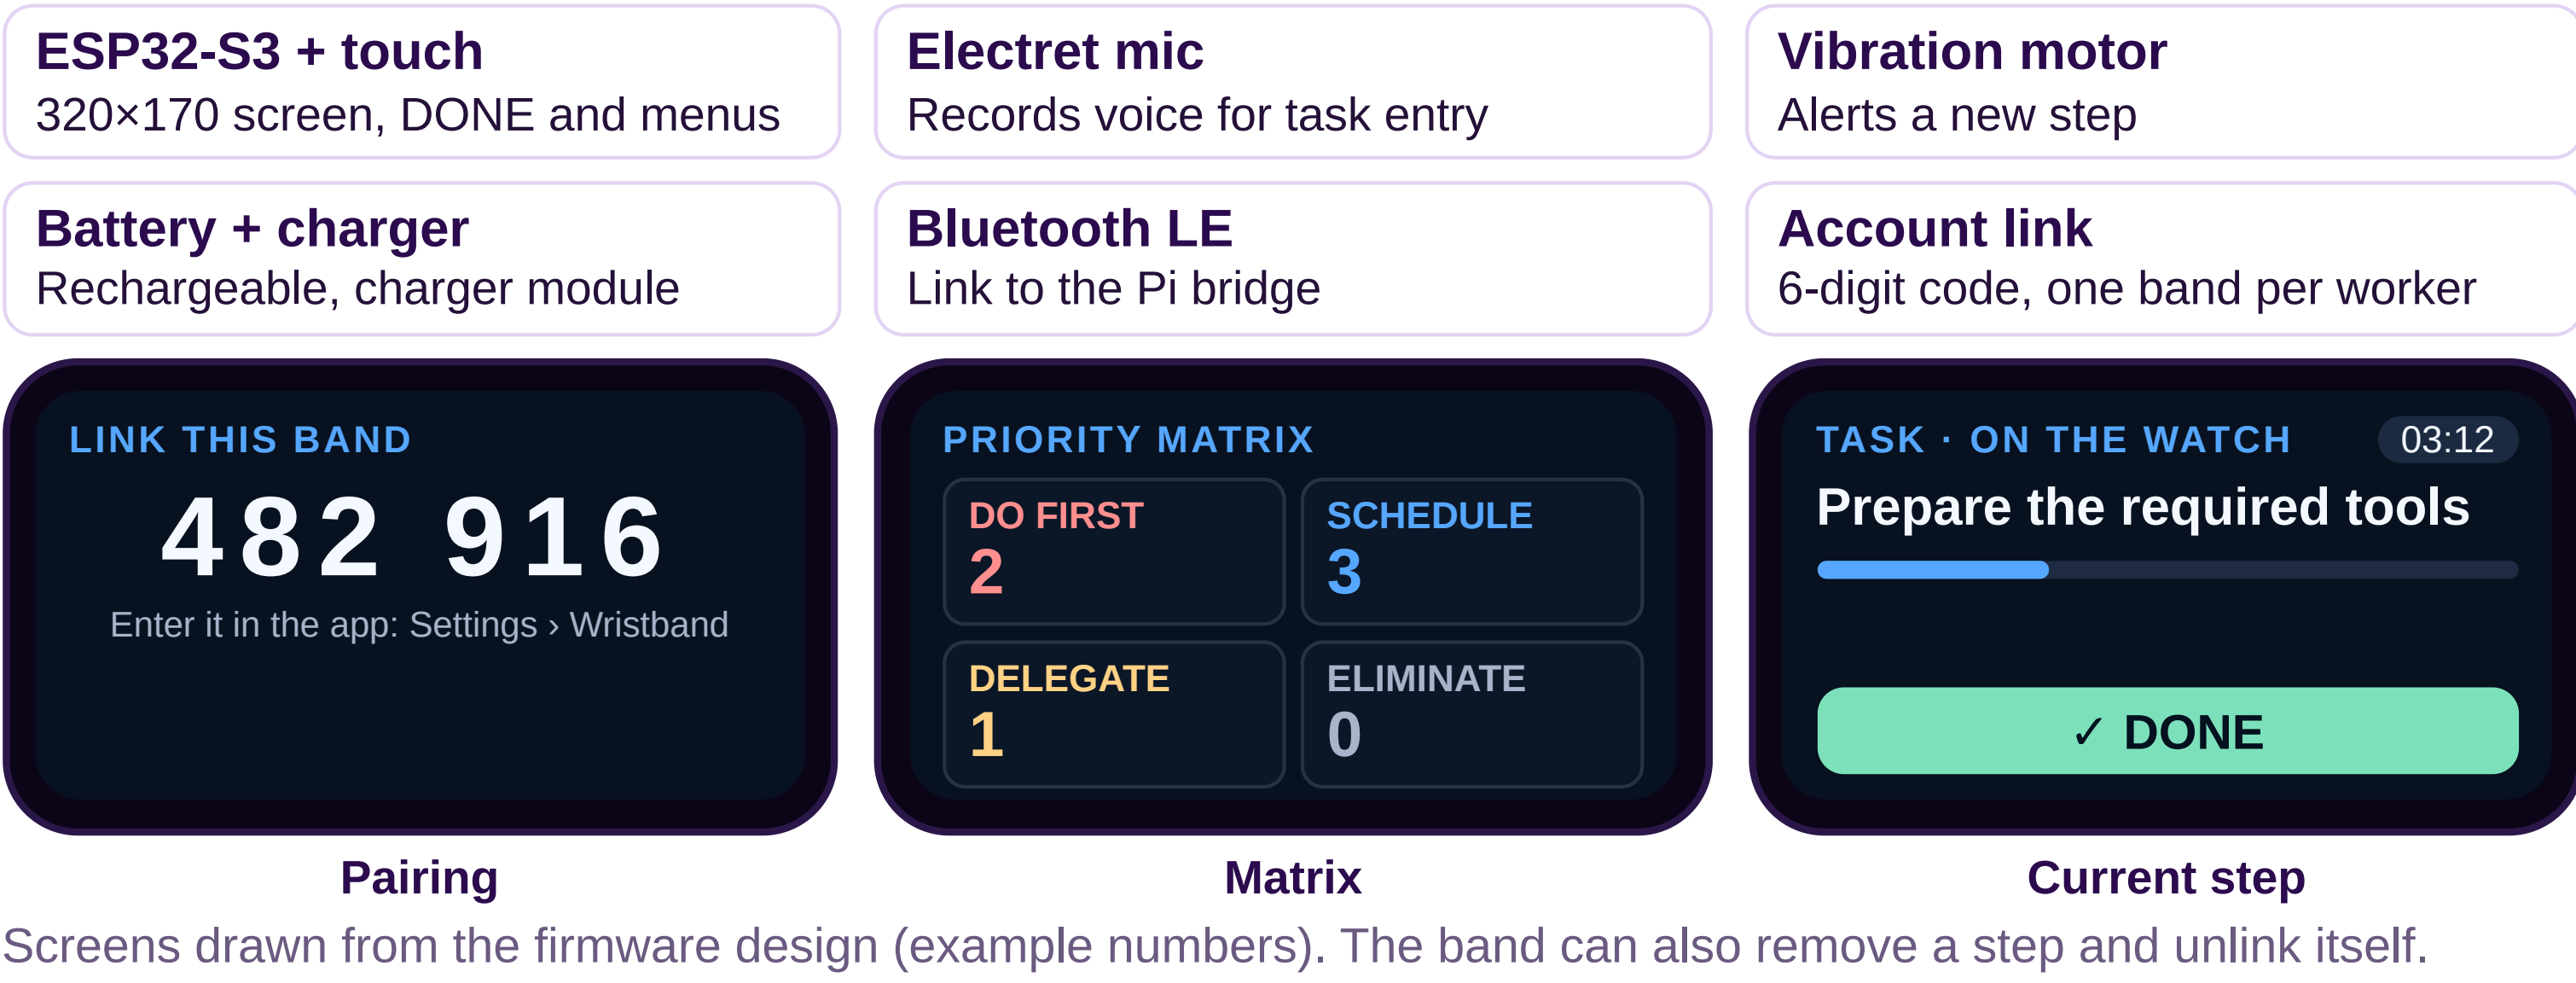

3 How it works

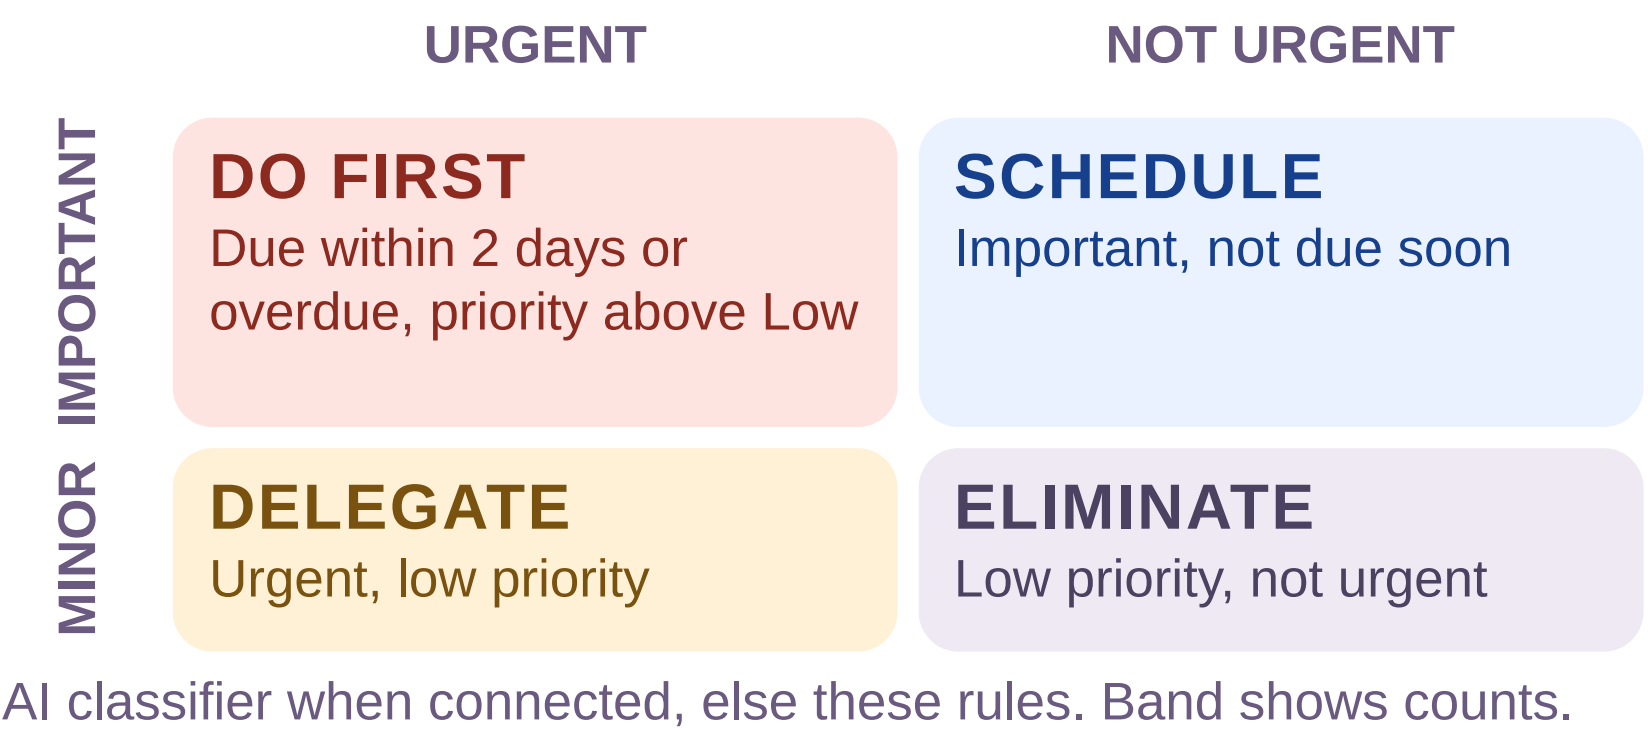

4 System architecture

5 The wristband

7 Priority matrix

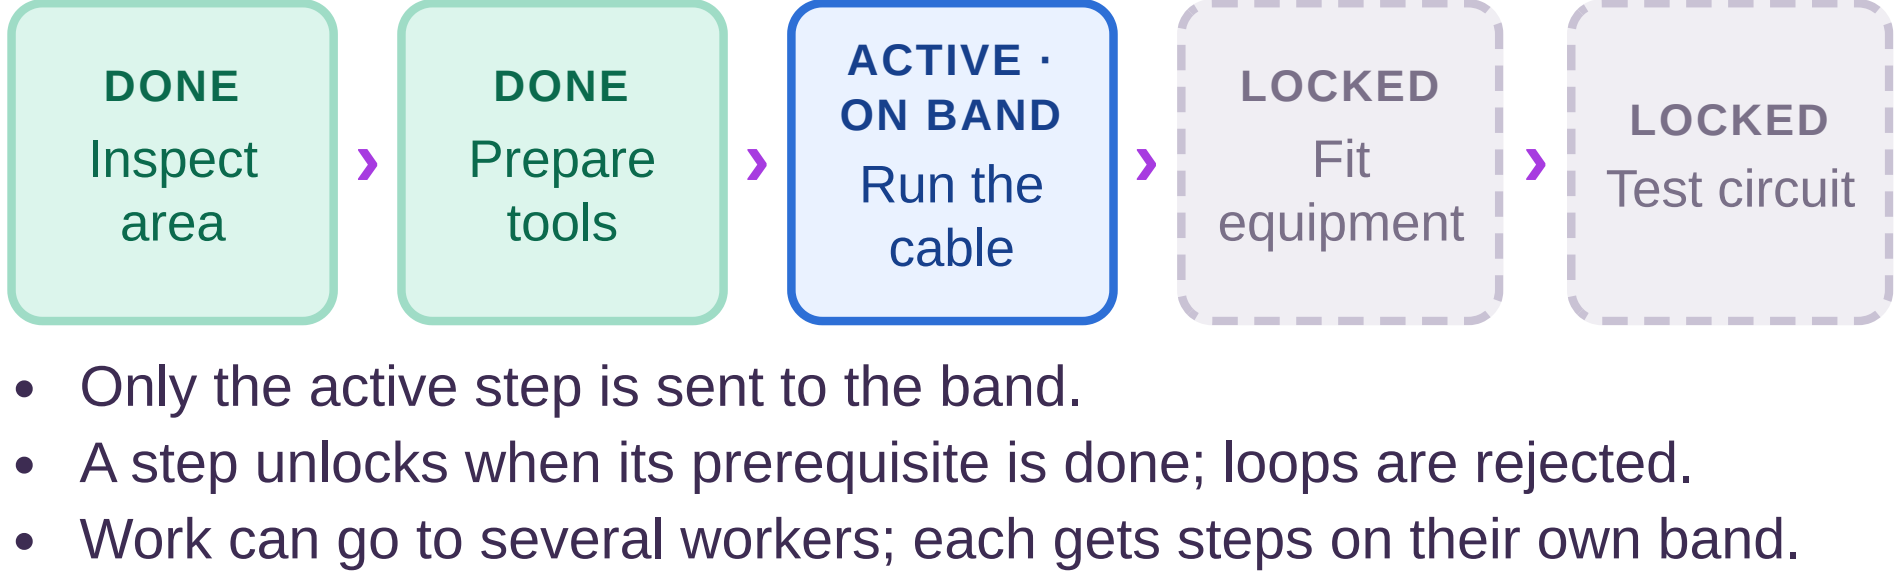

AI classifier when connected, else these rules. Band shows counts.

8 What makes it different

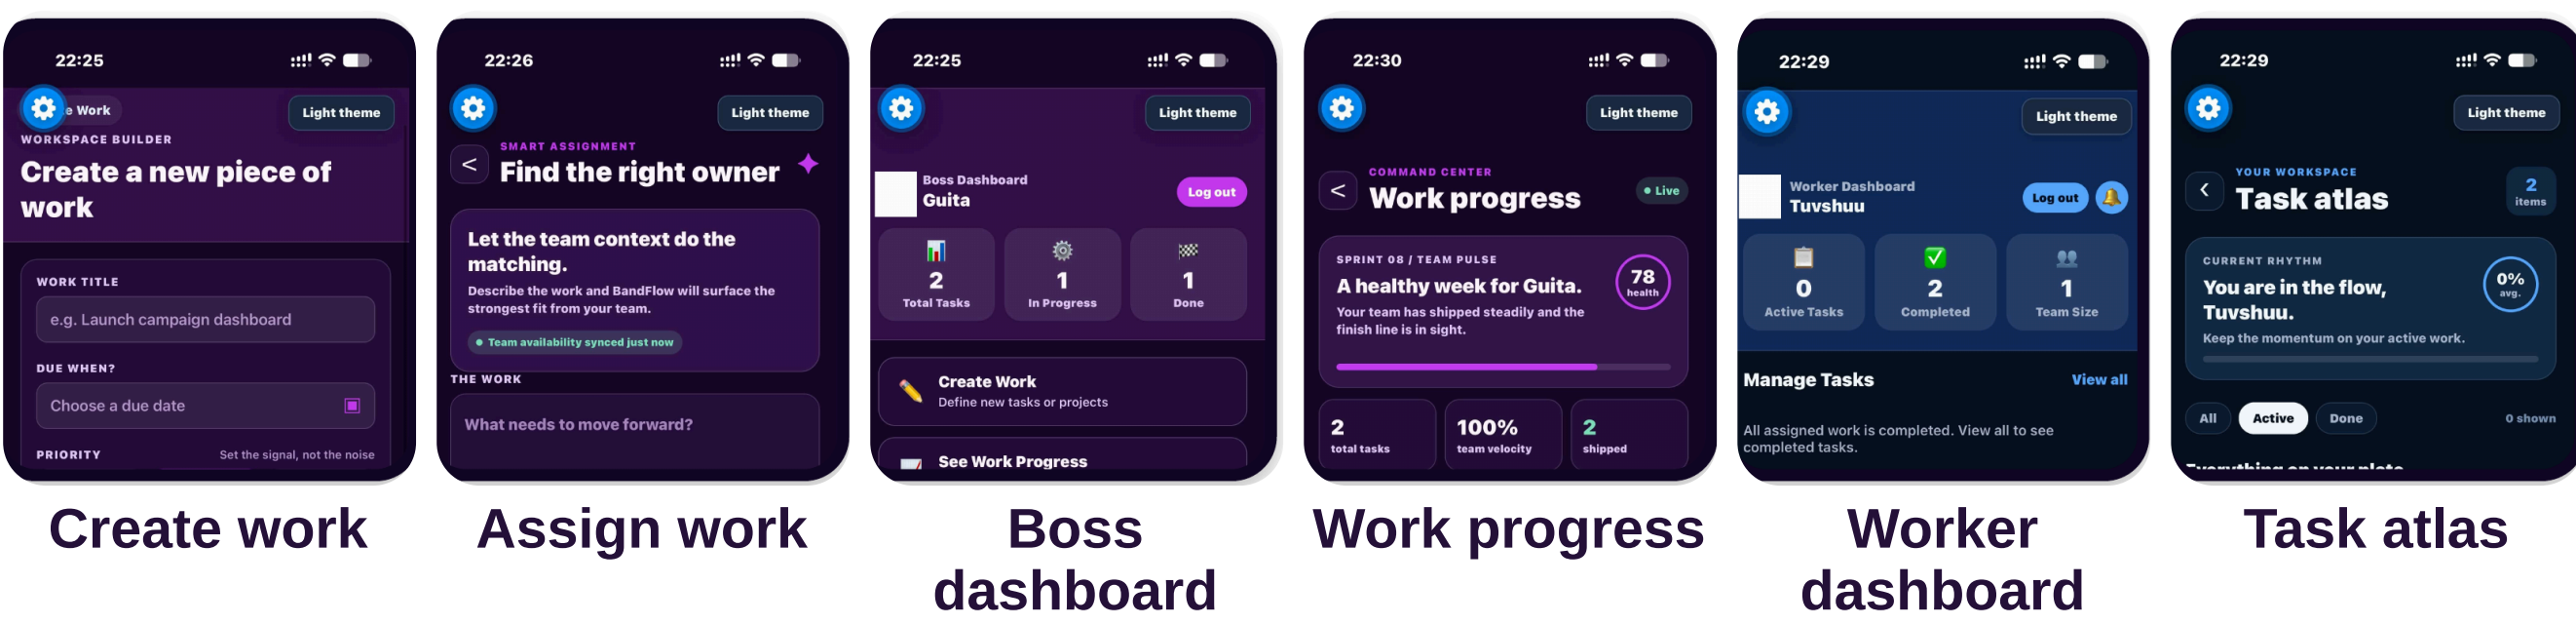

- Wristband as interface**
One step at a time, tap to confirm
- Dependency-aware queue**
Later steps stay locked until ready
- Voice task entry**
Speak to the band; Whisper transcribes
- Accounts and roles**
Boss and worker login, password reset, worker status
- Account-linked band**
Steps go only to that worker's band
- Matrix on the wrist**
Browse quadrants, works and steps
- Offline-tolerant**
Work saved if the band is away; events queued
- One backend**
App and web share one API and database

9 Dependency locking

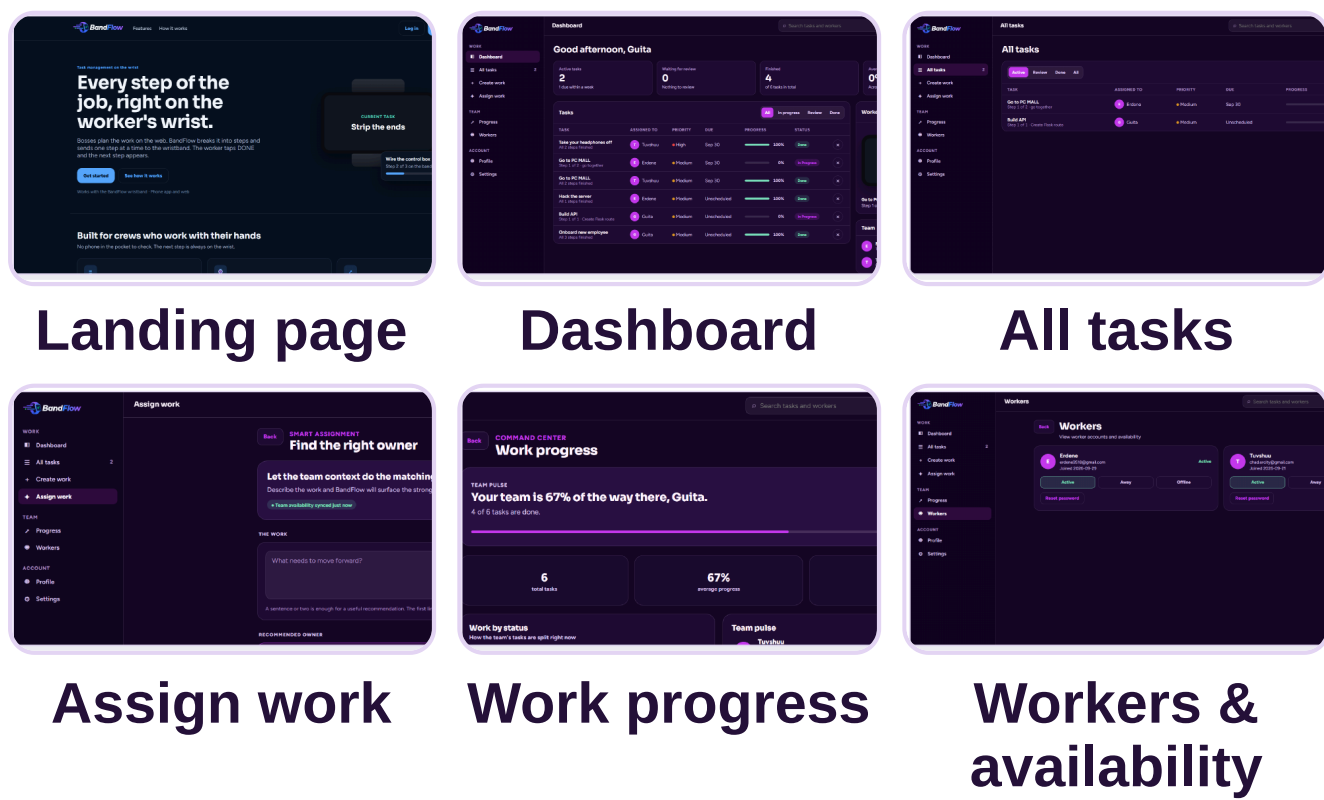

10 Interfaces: app & dashboard

Mobile app

Web dashboard

11 Project status

Built

Accounts and roles · work, steps and dependencies · progress · step delivery and DONE over BLE · band pairing · priority matrix · app, web and wristband screens · event queue

In progress

Voice task entry · vibration alerts · battery and charging · optional AI service connection
